ORCANISM SM

Know earlier, Let's Cure it— Colorectal Cancer

Causes & Symptoms of Colorectal Cancer

HELP!

Hi there, I am Mr. Colon, a long colon. Don't you know that? According to the Hong Kong Cancer Registry, colorectal cancer is the No. 2 killer* among all the killing cancers.

Yes, you are right. In recent years, the incidence rate of colorectal cancer is always at the top. In 2019, the number of new diagnosed cases was over 5,500.

Oh no! But My friends & I have paid attention to our health ("The health status of the colon"). We should be fine.

Early colorectal cancers are mostly without symptoms, making nearly half of the patients in a late stage (Stage III or IV) upon presentation. Most of the colorectal cancer developed from benign polyps for more than 10 years. Early detection and removal of these polyps can effectively prevent the cancer formation.

Oh my god! When do we need a check-up then?

For those who have symptoms, such as blood or mucus in stool or persistent change in bowel habits, etc., are recommended to undergo colonoscopy. And, those with family history, or history of colon polyps, or aged 50 or above, should also undergo colonoscopy regularly or have the colorectal cancer screening.

*According to the Hong Kong Cancer Registry, Hospital Authority: Leading Cancer Sites in Hong Kong in 2019, October 2021 (The above information is provided by AIAUNION)

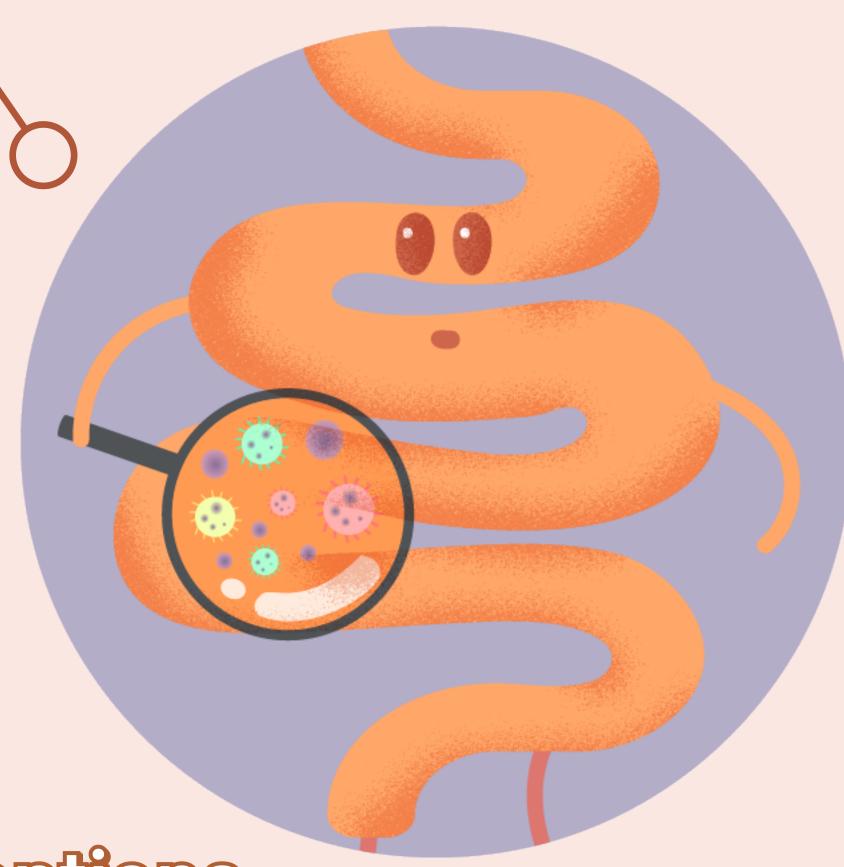

Colorectal Cancer Prevention Test

Before treatment

Recently, I had blood and mucus on the stool and more frequent bowel movements. However, it is not so smooth. Thus, I took the colonoscopy and was diagnosed colorectal cancer.

Endoscopy Test

Treatment options

Types of examination:

- Colonoscopy
- Faecal immunochemical Test

If needed, you may contact your family doctor or visit the medical centers / clinics to conduct the test(s).

Have doubt?! Don't hesitate to check!
